#### Be on the safe side:

Scenes like this can be avoided in future with the TÜV NORD "Safety of Loads" certificate.

This "accident" was caused by several factors:

- The crates were stacked up in the loading area without any additional securing.
- After the truck had been 70 per cent loaded with empty crates, full crates were then stacked on top.

The extremely top-heavy load toppled over during cornering.

vehicle size and independent of the weight

Load securing concept in a courier vehicle with lashing and shelving systems.

#### Tested Safety of Loads in Vehicles with the TÜV certificate

TÜV NORD STRASSENVERKEHR is your strong partner for all safety of loads issues.

Our wide range of safety of loads services gives a long-term boost to the quality of your whole transport logistics chain.

You benefit from competitive, time and cost advantages – and reduce the number of incidents.

#### Our service spectrum:

##### Certificates for safety of loads and vehicle bodywork strength

- Clear and incontrovertible evidence of bodywork strength and the effectiveness of load securing systems
- Documented by a test report, certificate and a sticker on the certified vehicle or bodywork

##### Consulting service and expert reports

- For hauliers and vehicle pools on safety of loads aspects

##### Seminars and training courses

- For hauliers, drivers, dispatchers and loading staff

##### Written expert reports and opinions

- For courts, authorities, insurers and associations
